

# My Carnivorous Plant

Design and draw a plant that attracts, capture and digests insects or other animal life.

**Remember!**  
Your plant will need roots, leaves and be able to trap insects or other animal life.

### Think about trapping by...

- catching the animal in a cage of some kind.
- making the animal stick to your plant.
- having a trap that's easy to get into but impossible to escape from.
- containing a liquid.

### Describe how your plant traps insects or animals:
